Hi, I have a Sony NWZ-E344. Very compact and does a great job. Good display and works with a lot of software. The PC thinks it is an external drive and you can just dump stuff to it. Able to use many formats of music. I generally do 320K MP3s. It will hold about 800 or so of them. Stock phones are OK, but I find Sennheisers better. Also easy to find in the $75 range. This is the second one I've owned in the same series and the other served me well for years (still works, but is only 4 gig).
