Using these speakers my set up has been 6pi. I have built many systems through the years, (the 6pi being the best) but due to some disease I can not leave well enough alone. The only self built speakers I have left are a pair of Zigmahornets.

I wish to change my pxb3:1k6 crossover to a pxb2:1k6.
The psd2002 and 10" mid are now in a 1.5 cu.ft. ported cabinet.
The 10" mid is no longer horn loaded. The 12" bass is in it's own 3.5 cu.ft. ported cabinet. I want to run the 1.5 cabinet full range using the 3 way crossover. The tweeter compensation cct. has been added.
When I use both cabinets I will be using a Behringer active crossover.
I can't find a schematic for the pxb2:1k6 crossover.
