You've got mail!

100 watts is more than adequate - I run mine with 10 watts.

You can setup with them upside down if on high stands, but I think the front mains sound best when at approximately the same height as the screen, maybe even a smidge lower, like level with the bottom edge. I like the surrounds slightly elevated.

More setup details and technical information at the link below:
High-Fidelity Uniform-Directivity Loudspeakers
