Final pictures before the speakers are packed and shipped to Phnom Penh. I did not get the veneer put on due to illness on Sat, will send the raw veneer with the speakers and install once they arrive. Will also ship the R13 insulation that I bought today.

Installed the H290 (w/ 2 layers of rubber gasket) using pocket screws. They project out a little further than I would like - but should be okay.

Overall, this has been a great build - my first outside of a sealed subwoofer.

Thanks Wayne for making your plans available and freely sharing your expertise.
