I built these with my friend about 6 months ago, forgot to post back here (too busy at AK!)

Detailed build thread here: http://www.audiokarma.org/forums/showthread.php?t=320142
Parts:

Treated the WG with some damping, used one more roll on this driver after the photo

Assembly:

Me assembling the crossovers:

Picked up some scrap heatsinks for the zobel network resistors, max dissipation needed to be 100W each, I think these will do

Assembled!

And done, with some nice ($$$) wool felt imported from Germany!
