---

hi wayne, could you tell me which is better suited for surround duties?

i really like the footprint of the 1pi for my small room, but how much better is the 2pi with the 10" woofer?

looking at the specs, they have the same sensitivity, watt, and spl. i supposed the 2pi digs a little deeper with the 10" woofer?

can i comfortably crossed the 1pi at 80hz? or do i need to crossed them higher (100hz, 120hz)?

thanks much!
