I haven't made up my mind about which receiver to use yet..

how about this one?

Onkyo TX-NR709 7.2

Would it be good enough?

It has 2 hdmi out, which is great for both my LCD tv and projector...

How do i power 4 subs from such a receiver? I mean, if i got the 4pis as the main speakers, and the 3pi subs to complement each, how do i hook it up? does the sub have an 'output' to the main speakers?
