I thought about those Marchand crossovers, and may still give them a try. They certainly have a good reputation. The thing is, I prefer a gentle 12dB/octave slope for multisubs, especially the flanking subs. That's what attracted me to that Pyle crossover - I searched for 12dB/octave units and found very few. Most are 24dB/octave, a few are 18dB. For multisubs, we want blending, so a gradual slope is better.
