Yes, I believe it would. Good find - I may bring one in to try it too.

Remember though - You don't want to high-pass the mains like you would in a prosound environment. Most times, in the prosound world, the speakers are used in a very large room where modes are not a problem. They're below the passband. But in our homes, rooms are much smaller and standing waves become a problem. That's what we want multiple sound sources in the 20-200Hz range.

Long story short - Use the low-pass section to drive the subwoofer amp, but send a full range signal to the mains.
