If it matters, the bass rolloff on the Genelecs is:

"Bass roll-off control operating in 2 dB steps from 0 to -8 dB @ 50hz"

I think the attenuation is all below 60hz maybe even lower with the "roll-off". I'll need to play around with it. there's also a "bass Tilt" control but I wouldn't be using that I don't think.

Here's the model:
http://www.genelec.com/1030a/specs/

Manual has the info on the tone switches.

Not sure we can fit two 20" cubes in the control room behind the desk... might be a tight squeeze.
