tom-m wrote on Fri, 18 November 2011 14:47 For music in a high quality format, I may try a few downloads from [hdtracks.com](#). I have started to keep and play music from a hard drive. [hdtracks](#) has stuff mostly in 24/96. I get the FLAC format. I have not tried much, but may try Hotel California. Of course they don't have everything. And it can be expensive.

Tom

I have looked into HDtracks and will be buying some of their HD offerings soon. I need to re-do my digital library, I ripped all me CDs as bit-perfect WAV files unaware that this file format doesn't store the metadata (album and song titles, etc). Am in the process of converting to AIFF so the metadata is kept with the music files. Digital music is nice, but kind of a PTA.

I have 2 terrabyte USB harddrives (I keep two copies in case of drive failure). With WAV if I try to re-load iTunes from the back-up drive I lose all track information. I read this would bnot be the case with AIFF, I guess we will see.
