I was able to transcode all the .wav files to AIFF. Now I must re-import them into iTunes. I also have backup copies of all the songs in both formats (I only have about 6,000 songs and a lot of harddrive space).

Looks like my next audio adventure will be trying to replicate the Bryston BDP-1's (digital player that plays files from an attached harddrive) sound quality for far less cash. The Auraliti PK100 provides automatic bit perfect playback of music from 16/44.1 kHz through 24/192 kHz and costs less than $800. My brother is a computer wonk, so hopefully he can build me one for less that uses the same or better components.

Aside, listened to some old Audioquest CD's last night and they sounded excellent. To bad all CD's don't sound that good.
