A Bose 901 creates a sound field that is 90% reflected. A horn creates sound that is 90% direct. They are two different approaches and I wouldn't combine them.

In my opinion, directional sound is best for mains and reverberent sound is best for surrounds. So I'd use some horn/waveguide speakers for your mains and repurpose your 901 speakers as surrounds.

But that's answering a question you didn't ask. To answer the one you did:

If I wanted to add some sparkle to 901, I'd probably add dome tweeters on each side.
