Hello! I would like to build an amplifier for headphones. I've found several popular schemes in the Net:
http://lonewolfblues.com/headphone.html
http://gilmore2.chem.northwestern.edu/projects/cmoy5_prj.htm
http://diyaudioprojects.com/Solid/Tube-Mosfet-Hybrid-Headphone-Amp/
Which of these schemes will you recommend for optimal work with headphones with resistance of 32 ohms?
