Good afternoon,

Wayne, I wanted to say up front that I appreciate all the work you've done in making these designs available and I look forward to being able to build them in the near future.

For use in a home theater as left,right and center would you suggest the 3 or 4 pi speakers? Unless advised otherwise I would be using the standard 80hz crossover.

I see on your website that the flat-pack of the 12pi is an option for purchase, do you offer 3 or 4 pi flat-packs?

I would also like to ask for the plan for these speakers.

Thanks in advance for your time,
Chris
