---

With the current delay of JBL 2226H & AE woofers. Is there another woofer out there that could possibly be on par with these, that could be used for 4pi? B&C, BMS, Fatial etc,etc.

I'm thinking worse case scenario. Or will JBL's become regularly available again. I realize this must put you in a difficult position. Just wondering if there is a plan B for the best performing 4pi design.
