I tested Beyma and B&C woofers and didn't like them in my two-way designs. It's not necessarily

Midrange quality is important, and integration with the tweeter is really the critical factor - If I can't get the crossover region dialed in, the midwoofer is not the best match. So I never have offered Beyma or B&C woofers in any of my matched-directivity two-way loudspeakers.

It has been a few years since I evaluated them, and I can't remember which model was best but there was one B&C driver that was closest to what I wanted. One 15" midwoofer was about on par with the Omega 15. It wasn't as good as JBL in quality and the price wasn't good enough to justify it as a replacement for the Eminence. That's why I never offered it. But maybe this situation is different for you, so if you want to try your hand on a design with an alternate midwoofer, this link may be helpful to you:

Notes for the DIYer
