Thanks for the quick response Wayne,

I won't be able to build 3Pi's for a while ($ constraints), so the 2Pi's up front will have to tide me over for now.

So 2Pi floor-standers - L/R Mains

1) What would you run for the center?
A 2Pi Bass Reflex or another 2Pi floor-stander? Or will the 2Pi mains be able to phantom well enough. I'd like decent/good center channel audio, especially for the voices. My Onkyo HTIB setup is killing me.

2) Just making sure....if I rebuild a 2Pi floor-stander into a Bass Reflex later on, I can keep the same XO?
