Well, at first Napster was a free site, then Metallica (along with others) pitched a fit about not profiting from song play and low and behold, Napster became a pay-site. Recently, however, Napster sold out to Rhapsody, which really upset me, because I liked the design of Napster's website WAY better than Rhapsody's. I also liked how you could download a song through Napster straight to your Itunes, whereas with Rhapsody you have to use THEIR software. Not cool.
