Oh, yeah, those look like they'll work nicely. They look like they're tuned pretty similarly to Alpha 10's, maybe just a smidge smaller box. I'll bet they sound kind of like two Pi speakers. Now that I think about it, in a larger tower, they'd probably be like two Pi towers too. But I'll bet you'll like that small box, plenty of growl in a small package. Wonder how they sound in the midrange - That's always where the rubber hits the road for a midwoofer.
