I agree with you on the front-panel switches. I like to be able to control the device without needing the remote. That's what the BTN lines are for. All you need is a momentary push-button switch for each function. A momentary connection to V- triggers the line.

BTN\_PWR is power switch

BTN\_SEL selects source

BTN\_UP is volume up

BTN\_DN is volume down

BTN\_LF is balance pan left

BTN\_RT is balance pan right
