Hi, I use a well ventilated shop. An exhaust fan runs all the time. Yes I suppose there are hazards, since I use solder with lead content and tend to fry wires and parts from time to time. At my age I expect something else will get me before they do. If much younger I would take precautions for sure.

Something you didn't ask about though is important and that is having a work area big enough (an uncluttered) with ground fault protected power. This will help keep you from getting zapped accidentally. A far greater risk as far as I am concerned and much more likely to be deadly.
