Subject: Pi Speakers for dubbing studio

Hi all,

I am in the process of specifying the speakers for in my new mixing theater. They will be used behind a screen in a room volume of about 8000 cu feet (20 by 30 by 13), and listened at a distance of about 18 feet.

I mostly mix material which is dialogue driven (documentary), so midrange precision is of primary importance.

So which speakers would do a better job at this between the 3pi and the 4pi.

Thank you very much

Bensky
