These are built on a 12" X 13" board.

I sort of mixed up on what I went $$$ on and what I went cheaper

I used Meniscus Audio 14ga air core inducers so I splurged a bit with these

I used Dayton caps. I used the standard 250V Poly on the 20uf and 10uf and I used the better new Dayton precision grade 250V Poly on the 6.8 and .047.

On the resistors I used the Dayton Precision Audio Grade Resistor line

I probably should have stood up the .6mH Inducer up. I hope this won't be a problem.
