That makes the most sense to have all three the same as much as possible. It will just fit, I wonder if the size of the 2 Pi can be shortened a bit and expanded in depth or width, mainly to allow a slight angle to the speaker towards the listener if this is recommended.

In reality most movies we watch are shot wider than 16:9, which is why the screen is so big, I may willing to make the screen smaller in order to get better sound quality.

Thanks for your input.

Regards,

William
