That's right, provided your SPL requirements are maintained, you can stretch the L/C/R arrangement as wide as your screen requires. That is really the size limit on something like this - as the room grows larger, there comes a point where the speakers don't provide enough output. Then you would need a different configuration. But as long as your SPL requirement is met, you can go wide with the left and right front mains. This assumes you're using a center channel though - I'd say the limit for a realistic phantom center is about a twenty to thirty foot spread.
