I am currently listening some CD very hard to reproduce accurately. Chopin 24 Préludes Opus 28 and some sonatas from Beethoven "Quasi una Fantasia". These types of recording, Piano solos, are tremendously difficult to be reproduce accurately. The dynamic is generally too high for "regular" speakers and the dynamic is generally completely compressed.
With Wayne's 4 Pi, the results are amazing, fantastic ... If you have any doubt with 4 pi's, do not hesitate. Wayne's 4 Pi are for everyone who loves music. Sell you current speakers and adopt 4 pis rather than spending time and money.
On my NAD monitor series 1300 preamp, there is an integrated parametric tone control. I have a little boost the bass +6 db at 50 HZ. The result is wonderful.
