To answer your electronics question: Your preamp is seeing your units in parallel.

So if they are all 10K

$10k \parallel 10k \parallel 10k = 3.3k$ (or just /3)

3.3k would be on the edge of "difficult to drive" for many preamps.

Or all 20k = 6.7k This would probably be ok

Or all 50k = 16.7k fine.

Or if you had 10k, 20k, 50k the combined parallel resistance would be 5.9k

Cheers,

Jeff
