the two is response below 100Hz.

The port is large and low, on the rear panel. Specifically, it's 4.5" diameter, centered 7" up from the bottom of the cabinet. This position is very important, as is the location of the midwoofer on the front baffle. It was chosen specifically to minimize the influence of low-midrange internal standing waves on the response curve.
Cabinet design, port placement and internal standing waves
