Hi Wayne, Hi everybody,

I am close to finish the cabinets of my 2pi tower, the next few days I will start the crossovers.

So I would like to know if it would be possible to make the crossover biwiring instead monowiring ... and if so, how should I do it.

I think, in this way, I could drive tweeters and woofers with 2 different amps, in the future.

What do you think?

Regards

Giampiero - Italy
