She's so fat she can't clean herself properly -- but she moves like lightning when motivated. We put bells on her and her sister to discourage bird hunting, although she still spears one once in a while. She lies still and literally grabs one out of the air if it flies past too close to her. She didn't get any of those chicks, though.On an unrelated note, I've begun a pair of Bob Brines's FT-1600 MkII cabinets to rehouse my Fostex FE167Es.
