---

I currently use a BFM table tuba sub. I love this sub but hate the form factor. It's huge. I was thinking of maybe going to two 3pi subs to replace it and just wondered how they would stack up against a single horn sub. Also how much power would I need to get them to work well? I love my 2pi and 1pi speakers but my bass is very localized as the sub sits right next to the seating area. I dont have room to flank the 2pis though and would have to have them on either side of the seating area. Also what would be a good amp to pair with the pair of 3pi subs? Can I get plans to =)
