Subject: 8 Pi woofer alternatives

Hello Wayne,
Before I order a pair of 8 Pi kits, I have to ask as whether the Deltalite 10 is an option as an upgraded mid-woofer over the Alpha 10? I know that Pi is not currently offering an alternate woofer from the menu options for the kit, but I have noted that you have mentioned (in other posts) the Deltalite as a superior driver in some important respects. I'd be happy to build the speakers with the Alpha's, but Wayne, would you offer the Deltalite and accompanying crossover changes as an alternative? More importantly, do you consider it worthwhile or suitable to go down this road?

I know that the electromechanical properties of the Alpha work in this application: does the Deltalite fall short in the bass when used like this?

Finally, here's a driver that in many ways, looks like an Italian version of the Alpha 10.

Many thanks!
