Subject: H290C and JBL LE14H-3

Hello all. My first post here.

I am hoping to finish an old project. I have the JBL LE14H-3 that I want to pair with the H290C and DE250 driver. I will use a modified econowave x-over which lowers the crossover frequency to 900Hz for the LE14. My question is will the H290C play down that low without distortion or break-up? I have not bought waveguides or CDs yet due to my apprehension. Any thoughts?
