I love the subs. The Pi 4's sound great without them, but there is no comparison to listening with them. They're a must-have.

I wouldn't change a thing about them.

I'm working on fixing a gain staging issue. My AVR pre-out is driven to clipping when my Crown XLS-2500 is only driving 293w ((measured by tonegen/oscilloscope) which, by the way, is plenty loud.) Hoping an Art Cleanbox will correct that issue.
