I built a pair of Pi-based speakers in 2002 that I only used briefly with a flea-powered 1800mW/ch SE tube amp. They have never been exposed to a high-power amplifier.

The crossover pair is un-modified. 8ohms, 2-way @ 1,600Hz

The Wayback Machine preserved this spec PDF from Eminence's 2003 site:

https://web.archive.org/web/20030412223128/http://editweb.iglou.com/eminence/eminence/pages/products02/pdf/crossovers.pdf

I would like $50 for the pair + shipping.
