I think Wayne is suggesting you model what you want and see you it turns out.  Wayne has designed these killer speakers, that are sized to give incredible sound without the drawbacks in many cabs, and that cost way way less than anything you can get anywhere retail.  If someone doesn't appreciate them for what they are, I, personally, wouldn't give them as "gifts"... I'd make them for myself and enjoy them in another room!

I hope you can get the spreadsheets Waynes mentions and figure how to achieve your design objectives in the desired size you're looking for!
