Hi, I just won a pair of Eminence alpha 8's from ebay yesterday, and I want to make some home house party/dj speakers with them.

I'll be going for the piezo version instead of the dome tweeter purely because of the music types played back will be mostly reggae. So I will want the tops to have that piezo sparkle.

What parts are needed for the crossover, I know the Motorola KSN1038A piezo (which an ebay seller still has genuine stock of) only needs like a 10w ceramic 33 ohm resistor.

What what value components does the bass/mid driver require when using a piezo with them? Hopefully only a simple coil.

So can you please send the plans, so when everything arrives, I can get started!!!

Thanks
