Hello all you experienced Pi builders, this is my first attempt at a PI speaker build.
I'm In Ireland so would love to make contact with anyone here who has built PI4 or similar.

I have 3 2226H drivers and will source 3 B&C 250 drivers in UK (need to keep post and duty costs down)
I would like to confirm that all I need to order from Wayne is 3 ready built crossovers and 3 Flares.??

Another question, I will build the cabs in 18 mm (3/4 inch) High density MDF and wonder is there anything to be gained by recessing the drivers in the wood ? versus simple surface mounting?
The cabinets will not be seen behind an acoustically transparent screen , I will paint them black.

I would also welcome any hints from members.
