Hi Bill,

I've been looking at your version of 2-Pi towers and wonder if they would be good enough as a permanent speaker for long time use and possibly for all musical styles (mostly rock, blues and jazz) - instead of going to build much more expensive 3 or 4 Pi for which really I don't have the money (even in the stock form).

So... the question is...
Is there any chance for an in-depth review of your 2-Pi Towers since you are apparently the only one with upgraded SB-29 tweeters?

Regards,
Max
