Hi guys I'm recently a new member of the forum but I'm not a stranger to it. I recently got my hands on a pair of 2227h's and 2226h's and I've been wanting to build a pair of 4pi speakers for quite a while now. I was wondering if somebody could tell me the pros and cons of using either driver/ their experience with them. I was also wondering where I would get specific crossover plans for both woofers using the de250 CDs . Thanks!
