40hz? Excellent! I think I'll combine the helper woofer idea with the "right beneath you" idea you gave at the beginning of this thread.

So I'll have stereo 4 Pi with .5 helper woofers for 40-200hz smoothing.

Then one big high powered sealed sub next to the couch for super deep bass that needs to come with a cardiac warning. lol

Maybe this setup will work good enough. One last question for now: Are you running a 4.2 system, or do you have a center channel? And if so, is your blu-ray player down-mixing everything okay? Thanks as always!
