These pics are of the composite decking sheet being fixed.... in fact yesterday...the plasterers were skimming the walls and pouring the concrete slab....

I will add more photos as the work progress.

Started laying electrical, speaker and signal cables. The cabling work is being carried out by a local guy and someone from my work giving him a hand.

To reduce hum and noise I want to install a dedicated line with only a single ground from the audio / home theater system to the electrical service panel. Don't want to attach anything other than the A/ V system to this special dedicated line.

Expecting the result to be noise and hum free power with a 'deep black background'.

By this stage of the project, I have already identified the following:

- Placement of all speakers
- Placement of A/V components
- Placement of video source
- Lighting needs
- Possible future enhancements
- Thermal Insulation & Acoustic Treatment

BTW I have provided a frame also... for supporting the screen.

I will try and post pics if there's interest... as soon as i work out how to do it...!!

I have all the kit I need already for this...mix of new and from old lounge... not top end by any means...but works for me...

HT room exterior view from terrace:
