Thank you again!

The towers are so much larger than I realized. I live in an apartment and move frequently. I might have to settle for the 2 pi studio speakers, unfortunately. I guess if they don't have enough bass and punch to satisfy, I can always build tower cabinets later down the road. I will be driving these with a k12-g diy tube amp from a kit I put together (8 watts/channel), and I like hip hop music so bass extension is important.
