Just to let you and anyone else looking know BHPotovideo.com has the XLS 2000 for \$250 right now, the XLS 1500 was \$209 so I decided to stick to one amp instead of using 2 bridged amps.

If the XLS 1500s drop anymore I may add 2 and move the XLS 2000 to power the L R channels.

This will be my first time using Pro Audio Amps, read such great things about crowns XLS line I can't wait to test it out.

As for progress, started cutting front baffles last night, using a dremel, it kind of works but I'm going to switch to a router. Just need to finish the baffles and recut 2 of the ports then I can start assembling.
