Third time's the charm when it came to cutting the boards for the ports. Luckily the smaller cuts where my last cuts, because somewhere between my last large cut and cutting the boards for the ports the rail on the contractor table saw I'm using jumped a tooth and was completely off. Lesson here cheap contractor saws suck. Need a real table saw soon.

Here are the ports, pinned and glued together.

Now that I have all the bottoms and side ready I'm going to start gluing the boxes together with out fronts and backs as I'm waiting on a router to cut the baffles.
