I'm looking to do the same thing in preparation of my waveguides.

I have found that the supposed depth of the waveguide flange is said to be 1/4".
I have also found that the supposed dimensions for the outer flare of the face of the waveguide is said to be 11-5/8" wide x 6-9/16" tall.

Whats wrong with the baffle on the left?
It looks good in the pics .

Regards!
