Wayne what is the package size for your midhorn?

I looked at building a mid horn or buying parts from another speaker for the midhorn. Seeing as I live in Australia it makes decisions more difficult. SO I am looking at budget, comparing it to others and going from there.

And do any other 10's work in the horn?

I have a pair of PHL 3451's that I might try in a horn but probably just use them for something else. Better to ask though then to wonder.
