Hi all.

I recently had reason to suspect that a website I am visiting is churning up data on my hotspot. I have disabled cookies, and decided to try out Opera mini browser.

I am on an iPad.

Has anyone used this app, or do you know an app that works better.

I recently started playing Sims Freeplay as well. Does anyone know if that uses a lot of data. I previously played it on free wifi, so haven't had a chance to test its data consumption.
