Subject: minimalistic web browser

Hi all.
I recently had reason to suspect that a website I am visiting is churning up data on my hotspot.
I have disabled cookies, and decided to try out Opera mini browser.
I am on an IPad.
Has anyone used this app, or do you know an app that works better.

I recently started playing Sims Freeplay as well. Does anyone know if that uses a lot of data. I
previously played it on free wifi, so haven't had a chance to test its data consumption.
